**FOR IMMEDIATE RELEASE**

## **Agile Communications Exhibiting Man-Pack Satellite Terminal at MILCOM 2010**

**November 1, 2010 – MILCOM 2010 – San Jose, CA** – Agile Communication Systems (ACS) today announced that at MILCOM 2010 they are exhibiting their new MST-100-M. This system offers the same features as the original Man-Pack terminal now deployed In-Theater for the US ARMY. The MST-100M features a fully motorized platform with auto-acquisition which locates and peaks on the desired satellite. This allows a soldier to focus on other tasks while the system locates the network which typically takes between 2-5minutes.

### **Man-Pack Satellite Terminal**

The Man-Pack Satellite Terminal (MST) is a portable Communications system consisting of a .75m satellite dish, tripod, and modem which are conveniently carried in a backpack for easy, remote use. The system can be configured to accommodate various up and down bandwidths. With Advanced DVB-RCS/S2 the system is capable of uplinking over 600Kbps of usable bandwidth. Slightly larger antennae yield larger uplink bandwidths.

The MST-100 is available in two models: MST-100 (with Computer Assisted Pointing - CAP) and MST-100-M (motorized pointing). Both models are:

- Available with Advanced DVB-RCS/S2, TDMA, FTDMA, DAMA or SCPC TOPOLOGY
- Dual Frequency DVB-RCS remote terminals
- All usable Satcom bands available (C, X, KU, and KA-Bands)
- Manual point with Cap OR Auto-Acquire/deploy systems
- Remote systems for Vehicles, Man-Pack, Fly-Away, Fixed Base Operations
- Secure and Non-secure Voice option built in to the ACS-4100 series modem

**Man-Pack MST-100-M shown IN-Theater**

**About Agile Communication Systems**

Agile Communication Systems (ACS) is a Small Business Systems Integration Company for Satellite and other Communication Technologies which provides a beginning-to-end solution for Military or Government communications projects. With over 30+ years of systems design and implementation experience, ACS is able to quickly deliver Communications systems in the field.

ACS will design a complete system, manufacture and integrate all components, install, train, and support, IN-theater or domestically

The company is a privately owned company, headquartered in Morgan Hill, California, in the Silicon Valley. CCR # HCXBCK. Cage Code: 4GCK7. NAICS Codes available upon request.

Agile Communication Systems. Your Trusted, Quick Response, Field Tactical MILCOM Solution provider.
